The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Volkert(5,096,933).

Volkert discloses processes for the production of rigid polyurethane foams containing isocyanurate linkages prepared by mixing and reacting polyisocyanates, various 2+ hydroxyl group containing higher molecular weight polyols, blowing agents inclusive of alkanes alone, flameproofing agents, and chain extenders/crosslinkers (see the entire document). Volkert's examples utilize sucrose based polyols which are branched and recites trimethylolpropane based polyols which are all branched polyols.

Volkert differs from applicants' claims in that NCO values of 200-600 are not particularly recited. However, Volkert does set forth ranges of variation and selectivity in choosing the NCO contents for conducting the reactions of their concern, and, further, it is well known to the ordinary practitioner in the art that increasing NCO content values leads to increased isocyanurate contents which have the known result of increased flame retardance and heat and sag resistance. Accordingly, it would have been obvious for one having ordinary skill in the art to have increased NCO indices within the teachings of Volkert for the purpose of increasing the relative amount of isocyanate based material in the final products in order to arrive at the products of applicants' claims in the absence of a showing of new or unexpected results.

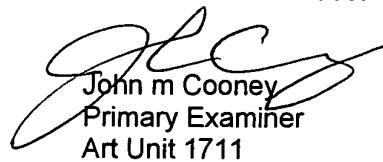

Applicants' arguments have been considered, however, the results for consideration do not rebut the position of obviousness in a manner which is commensurate in scope with the claims. Further, regarding applicants' arguments concerning Volkert's teaching of permissible inclusion of water, it is maintained that Volkert's teaching clearly anticipates exclusion of water from its invention, and such is not an element of the obviousness rejection.

Applicants' affidavit evidence has been considered but the results do not show unexpected results commensurate in scope with the scope of the claims. Further, it is not seen how the comparative examples of the affidavit having NCO values of the claims and no water, which are intended to be compared with the results of the application differ from the scope of the claims in a pertinent way, and it is, accordingly, not seen how they are, in fact, comparative showings.
